

WHY WORKJAM? BEHIND THE SINGLE PANE OF GLASS

Executives and management teams want to improve employee engagement, increase efficiency and performance, decrease turnover, and find a way to communicate more effectively with frontline staff. For years, they've had to make do with labor-intensive and time-consuming manual options, or they've pieced together an "okay" solution from multiple digital providers.

WorkJam sets a new standard for digital workplace platforms, transforming how our customers manage their workforce and day-to-day operations. Here's how we're different.

A SINGLE PLATFORM AND APP

People use only 10 apps a day on average. A workplace that asks employees to use multiple apps is one that will see lackluster adoption rates and poor ROI. WorkJam offers a complete digital workplace through a single platform, making adoption convenient and easy for employees, improving long-term success rates.

MODULAR & CONFIGURABLE

Don't want to leap in with both feet? We understand. WorkJam lets your company ease into using a digital workplace platform, starting with a basic system that immediately saves you time and effort. You can then turn on other modules at a pace that makes sense for your business and your people.

IRONCLAD SECURITY

When it comes to security, WorkJam goes above and beyond. The platform delivers greater security than traditional enterprise-grade technology, and exceeds even the standards set forth by military, financial services, and healthcare sectors. Continuous testing, stringent cybersecurity practices, and rigorous security controls let you rest easy.

SYNERGISTIC ENHANCEMENT

Every feature of WorkJam is proprietary, with each module designed to work in concert with the other systems.. Enhance the ease of the shift management module by activating the communications module. Or, add the surveys module to make training programs more relevant and exciting.

BRANDED EXPERIENCE

Building a workplace culture takes time and consistency. WorkJam helps strengthen your employer branding by offering white-labeling. Every aspect of your digital workplace, from shift management to rewards and recognition to surveys and polls—it's all under your brand, helping you reinforce your corporate culture.

SEAMLESS INTEGRATION

A system is only as good as its ability to integrate data, and WorkJam delivers. Our platform uses documented open API, allowing for both real-time and bulk integration with workforce management, human capital management, point-of-sale, order management, learning management, and any other system you use to keep your business moving.

ENTERPRISE CLASS

Implementing a workforce management platform with the strength and agility to handle the fast-paced, demanding environment of household-name Fortune 500 companies? Not a task for the faint of heart. But it's a task that WorkJam handles smoothly and seamlessly every single day, and our customers (and their over 1 million employees on our platform) couldn't be happier.

PROVEN ROI

One WorkJam customer saved over \$250K on printing costs alone after implementation. Another customer's WorkJam platform handled 2000 shift swaps in the first three months after implementation, saving approximately 200 hours in manager time. And with WorkJam's 30-day Quick Start, you can start seeing your return on investment in the same quarter as implementation.
